key features this technique is growing in importance the first comprehensive book in this subject a practical and comprehensive account of the technology and applications of hydroblasting a technique used more and more in the

preparation of steel and other surfaces steel surfaces will corrode unless they are properly prepared and coated such corrosion can have disastrous effects eg bridge collapse therefore the preparation of the surface is of major importance due to environmental pressure to move away from grit blasting high pressure water can now be used to prepare surfaces with few environmental costs this book systematically and critically reviews the state of current hydroblasting technology and its applications the book is essentially practical in nature and is written by an expert in the field

the maritime engineering reference book is a one stop source for engineers involved in marine engineering and naval architecture in this essential reference anthony f molland has brought together the work of a number of the world s leading writers in the field to create an inclusive volume for a wide audience of marine engineers naval architects and those involved in marine operations insurance and other related fields coverage ranges from the basics to more advanced topics in ship design construction and operation all the key areas are covered including ship flotation and stability ship structures propulsion seakeeping and maneuvering the marine environment and maritime safety are explored as well as new technologies such as computer aided ship design and remotely operated vehicles rovs facts figures and data from world leading experts makes this an invaluable ready reference for those involved in the field of maritime engineering professor a f molland bsc msc phd ceng frina is emeritus professor of ship design at the university of southampton uk he has lectured ship design and operation for many years he has carried out extensive research and published widely on ship design and various aspects of ship hydrodynamics a comprehensive overview from best selling authors including bryan barrass rawson and tupper and david eyres covers basic and advanced material on marine engineering and naval architecture topics have key facts figures and data to hand in one complete reference book

this volume highlights the latest advances innovations and applications in the field of seismic design and performance of steel structures as presented by leading international researchers and engineers at the 10th international conference on the behaviour of steel structures in seismic areas stessa held in timisoara romania on 25 27 may 2022 it covers a diverse range of topics such as behaviour of structural members and connections performance of structural systems mixed and composite structures energy dissipation systems self centring and low damage systems assessment and retrofitting codes and standards light gauge systems the contributions which were selected by means of a rigorous international peer review process present a wealth of exciting ideas that will open novel research directions and foster multidisciplinary collaboration among different specialists

development of environmentally friendly products gains an increasing portance in science and in industry while product

development was strongly dedicated to achieve quality cost and time targets environmental issues indirectly had always been under consideration by engineers see fig 1 furthermore a methodology for the development of environmentally sound products was missing despite of significant progress in using computer aided tools for product development and design environmental aspects were attended computer aided tools typically do not include methods for considering environmental issues enabling the designer to assess a product's environmental effects fig 1 vision of environment as a key target for product development v vi preface product related environmental issues are getting more and more political and public awareness development of environmentally friendly products has become an action item for both politics and industry unfccc 1997 energy consumption is on the agenda and covers pollution and resource saving typical topics of directives of the European Union are waste noise air pollution water nature and biodiversity soil protection civil protection and climate change after the translation into national law the development of environmentally friendly products is a basic approach to contribute to the fulfilment of the topics mentioned above in the European Community a communication from the Commission to the Council and the European Parliament on integrated product policy was adopted on 18 June 2003 EC 2003
